

Report
Of
Internship

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Name of Student: ABHINAV KUMAR MISHRA

Roll Number of Student: 2410030515

Batch: 2024-28

2026-27

CANDIDATE'S DECLARATION

I, Abhinav Kr. Mishra do hereby declare that the internship report titled “**AI and Data Analytics**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Student Name:-Abhinav Kumar Mishra

Roll No:-2410030515

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

Student Name: Abhinav Kr. Mishra

Roll No: 2410030515

COURSE COMPLETION REPORT

Cisco Networking Academy

Report on Three Completed Courses

Course 1	Introduction to Modern AI
Course 2	Apply AI: Analyze Customer Reviews
Course 3	Data Analytics Essentials
Issuing Organization	Cisco Networking Academy

Certificate completion dates: June 8, June 11 and June 15, 2026

Academic Course Completion Report

1.Introduction

This report gives a summary of three courses that I finished at Cisco Networking Academy. The courses are Introduction to Modern AI Apply AI: Analyze Customer Reviews and Data Analytics Essentials. The report is made from the learning outcomes that appear on the certificates. The report explains the ideas that were taught the skills that each course helped me learn and why those skills are useful, for computer science and data work.

The three courses share a theme. They all use digital and artificial intelligence tools to read data solve real problems and help people make better decisions. The first course gives an introduction to AI and large language models. The second course shows how to use AI to study customer review data. The third course shows the data analytics process and the tools that can be used.

2. Objectives of the Report

- To record the three courses that were finished using Cisco Networking Academy.
- To describe the things learned that were written on the certificates.
- To talk about how artificial intelligence, data analytics and solving problems are connected.
- To list the tools and ideas that went along with the courses.
- To think about how the knowledge gained can help with learning in computer science and similar areas.

3. Course Completion Summary

Course	Organization	Issue Date	Main Area
Introduction to Modern AI	Cisco Networking Academy	June 8, 2026	AI, ML, LLMs, prompting, multimodal AI
Apply AI: Analyze Customer Reviews	Cisco Networking Academy	June 11, 2026	AI-assisted review/data analysis
Data Analytics Essentials	Cisco Networking Academy	June 15, 2026	Data analytics, statistics, preparation, tools

4. Course 1 – Introduction to Modern AI

The Introduction to Modern AI course gives a look at artificial intelligence and machine learning. The certificate says the course covered AI ideas and machine learning basics. It taught how to use AI for image projects how to translate between languages and how to work with language models or LLMs. The course also explained how to create prompts for LLMs, common tasks that use LLMs and how to interact with chatbots. It showed how chatbots can collaborate and how LLMs can use tools such, as web search and web page scraping.

- 4.1 Major Topics Covered
- I explore concepts in Artificial Intelligence and Machine Learning.

- I examine AI applications that involve objects in pictures, background removal, object detection and image segmentation.
- I study Machine translation and its nuances and limitations.
- I review fundamentals of how Large Language Models work.
- I learn how to prompt LLMs to make use of their capabilities.
- I practice LLM-enabled tasks such as idea generation, summarization and grading.
- I engage in two-way dialogue with chatbots, including mock-interview practice.
- I see collaboration between two chatbots to achieve a goal.
- I use LLMs with tools such, as web search and web page scraping.
- I try multimodal prompting using images and text.

4.2 Learning Outcomes

This course builds a base of knowledge about modern AI systems and how they can be used in real life. One important point is that AI tools must be used with correct prompts and, with an understanding of their limits. The certificate also highlights multimodal interaction, where both images and text can be combined in prompts.

4.3 Relevance to Computer Science

These topics are important in computer science because artificial intelligence tools are being used more and more in software creation, data handling, picture review, language understanding and tools that help people work better. Learning the ideas, behind AI and large language models gives a good starting point for exploring machine learning, deep learning, language processing and creative AI later on.

5. Course 2 – Apply AI: Analyze Customer Reviews

The Apply AI course focuses on using AI and other tools to look at customer reviews or other table data. The certificate says it covers LLMs, chatbots that can write and run code spreadsheet apps, like Excel text editors and human review when a final decision is needed.

5.1 Major Topics Covered

- Selecting the appropriate AI or non-AI tool for a task.
- Processing tabular data using an LLM, a chatbot that writes and runs code, and Excel.
- Formatting tabular data so that it can be transferred between a chatbot and a spreadsheet application.
- Prompting a chatbot to write and run code for processing tabular data.
- Writing complex spreadsheet formulas with assistance from a chatbot.

- Keeping a human in the loop for final decisions.

5.2 Practical Significance

The course shows how to use AI in a way. Of looking at an AI system as a substitute for human thinking the process uses AI help along, with regular software and people checking the work. This works well for jobs that need data to be cleaned worked on arranged or understood before a choice is made.

5.3 Example Workflow

1. Collect customer-review information in a tabular format.
2. Prepare and format the data so it can be processed consistently.
3. Choose an appropriate AI or non-AI tool for the required task.
4. Use an LLM or coding chatbot to assist with data processing.
5. Use spreadsheet formulas or code where appropriate.
6. Review the AI-assisted results and make the final decision with human judgment.

6. Course 3 – Data Analytics Essentials

The Data Analytics Essentials course gives an introduction, to the data analytics process. It shows how data can bring value. The certificate covers data characteristics, how to get data, changing data, simple statistical analysis preparing data working with Excel, SQL, Tableau and other tools and looking at and sharing a project portfolio.

6.1 Major Topics Covered

- How the data analytics process creates value from data.
- Characteristics of data, including formats and availability.
- Methods used to acquire data.
- Transformation of data using analytics tools.
- Basic statistical analysis.
- Data preparation techniques.
- Hands-on laboratory work using Excel, SQL, Tableau, and other tools.
- Evaluation and sharing of a project portfolio.

6.2 Importance of Data Analytics

Data analytics provides a structured way to convert raw data into useful information. Data may exist in different formats and may require preparation or transformation before analysis. Statistical techniques and analytics tools can then be used to identify useful patterns and support decision making.

6.3 Tools Mentioned in the Course

Tool	Role in the Course
Excel	Spreadsheet-based data processing and analysis
SQL	Working with data in databases

Tableau	Analytics and data visualization
---------	----------------------------------

7. Relationship Between the Three Courses

The three courses as a set of learning experiences that fit together nicely. The course Introduction to Modern AI sets up the ideas and uses of modern AI, such, as LLMs and multimodal prompting. The course Apply AI: Analyze Customer Reviews takes the AI ideas and turns them into a real data-processing task. The course Data Analytics Essentials gives a base of analysis covering data prep, statistics, SQL, Excel, Tableau and project work.

Course	Primary Focus	Connection
Introduction to Modern AI	Understanding AI and LLM concepts	Provides AI foundation
Apply AI: Analyze Customer Reviews	Applying AI to tabular/review data	Connects AI with practical data tasks
Data Analytics Essentials	Analytics process and tools	Provides structured data-analysis foundation

8. Skills and Knowledge Developed

- Basic understanding of Artificial Intelligence and Machine Learning.
- Awareness of Large Language Models and effective prompting.
- Understanding of multimodal prompting using text and images.
- Ability to identify suitable AI and non-AI tools for different tasks.
- Understanding of tabular data processing and formatting.
- Awareness of AI-assisted coding and spreadsheet formula generation.
- Understanding of the data analytics lifecycle.
- Basic statistical and data-preparation concepts.
- Exposure to Excel, SQL, Tableau and related analytics tools.
- Understanding of the importance of human review when using AI-assisted results.

9. Learning Reflection

The classes give a look at technologies that are important in todays computers. A key point is that artificial intelligence and data analytics are not subjects. AI can help with handling data and looking at it. Data analytics gives the ways and tools to work with data in a proper way.

The classes also show how important it is to pick the tool for a specific job. An LLM, a spreadsheet, SQL, a charting tool or normal software might all be the choice in different cases. The certifications also stress the need for people to be involved in a way especially when results, from AI are used to help make choices.

10.Future Scope

- Practice data analysis using Excel and SQL on real datasets.
- Learn Tableau or another visualization platform through small projects.
- Strengthen Python programming for data analysis and automation.
- Study machine learning algorithms beyond the introductory level.
- Practice writing effective prompts and evaluating AI-generated outputs.
- Explore natural language processing and computer vision in greater depth.
- Build small projects that combine AI with data analytics.

11.Conclusion

Completing the three Cisco Networking Academy courses gives an introductory base in modern AI and data analytics.

The Introduction to Modern AI course covers AI, Machine Learning, LLMs, prompting and multimodal applications.

The Apply AI: Analyze Customer Reviews course focuses on using AI and standard tools for tabular data tasks while keeping judgment.

The Data Analytics Essentials course covers the analytics process, data characteristics, preparation, basic statistics and tools such as Excel, SQL and Tableau.

Together the Cisco Networking Academy courses give a starting point for more learning, in Artificial Intelligence, Data Analytics, Machine Learning and related fields of Computer Science.

12.Certificate Evidence

The following pages contain the three certificates of course completion supplied for this report.

Certificate 1 – Introduction to Modern AI

Certificate 2 – Apply AI: Analyze Customer Reviews

Certificate of Course Completion

Abhinav Kumar Mishra

has successfully achieved student level credential for completing the course:

Apply AI: Analyze Customer Reviews

The student was able to proficiently:

- Choose the right AI or non-AI tool for each task (LLM, chatbot that runs code, spreadsheet app, text editor).
- Process tabular data with an LLM, chatbot that writes and runs code, and spreadsheet app (Excel).
- Format tabular data that can be transferred between a chatbot and spreadsheet app.
- Prompt a chatbot to write and run code to process tabular data.
- Write complex spreadsheet formulas with the assistance of a chatbot.
- Include the "human in the loop" to make final decisions.

Certificate 3 – Data Analytics Essentials

Certificate of Course Completion

Abhinav Kumar Mishra

has successfully achieved student level credential for completing the Data Analytics Essentials course.

The student was able to proficiently:

- *Explain how the data analytics process creates value from data.*
- *Explain the characteristics of data, including formats, availability and methods to acquire.*
- *Transform data using analytics tools.*
- *Analyze data using basic statistical and data preparation techniques.*
- *Complete hands-on lab using Excel, SQL, Tableau and other tools.*
- *Evaluate and share project portfolio.*
